

Each genotypic class i is characterized by its growth rate and reproductive variance

$$r_i, \sigma_i \approx \sigma \approx 1$$

Each genotypic class i is characterized by its growth rate and reproductive variance

$$r_i, \sigma_i \approx \sigma \approx 1$$

Variation of the population size of a genotypic class

Reproductive variance

$$dN_{i,t} = r_i N_{i,t} dt + \sqrt{\sigma} N_{i,t} dB_t$$

Growth rate

with B_t
Brownian motion
